

How to Use a GIF

Step 1 – Download the GIF

The first step is to download our set of GIFs to your device. When discussing clean energy, nuclear or Constellation online with friends, neighbors, family and the like, we encourage you to use these GIFS that best represent the expression or ideas you want to convey.

Once they are downloaded you will need to save them to your device. On most devices, you can right-click on the GIF and select "Save image as" or a similar option. Choose a location on your device where you want to save the GIF.

Step 2 – Insert the GIF

After downloading the GIF, you can now insert it into your desired platform. The process may vary depending on where you want to use the GIF:

- **Emails:** In most email clients, you can simply click on the "Insert image" icon, usually represented by a picture frame, and select the downloaded GIF from your device.
- **Social Media:** When creating a new post or comment on social media platforms like Facebook or Twitter, you'll find an option to attach an image or GIF. Click on that option and select the downloaded GIF from your device.

Step 4 – Share and Enjoy!

Once the GIF is inserted, you can share your message or post. The GIF will animate and convey your desired expression or idea.

Remember, it's essential to use GIFs in appropriate contexts and be mindful of any guidelines or policies specific to the platform you're using.

Please note that the instructions above are general and may not cover every specific platform or situation. It's always a good idea to consult the support or help sections of the platform you are using for detailed instructions.
